Active and Reserve Component Marksmanship Trainers Combine Forces to Cut Zeroing Time, Qualification Time & Ammo Costs at Ft. Benning.

April 20, 1998 — Marksmanship instructors from the **2/29th Infantry Regiment** at Ft. Benning, GA combined forces with counterparts from the **Army Reserve Small Arms Training Team (SATT)** and **84th DIV (IT)** to set new standards for zeroing M16A2 rifles during Initial Entry Training (IET). **This success cut two full days out of the IET training schedule**, and cut the average number of live rounds required for a soldier to zero the weapon from 24 down to 16 — **a 33% real dollar savings**.

IET Soldiers Check Targets on the 25 Meter Zero Range

These active and reserve subject matter experts used BEAMHIT™ Marksmanship Training Systems, along with a **SATT**-developed training support package (TSP), to take a typical 200+ strength company from the 1st Infantry Training Brigade through basic rifle marksmanship (BRM) all the way to shot grouping and zeroing. Using BEAMHIT™, US military units can now practice shot grouping and 'closed loop zeroing' wherever a 25 meter (Army) or 36 yard (USMC) distance is available, saving range time, travel costs, and ammunition.
